

*Better solutions for your
products - Plastic containers
for the food industry*

- Corrosion free
- Easy handling
- Cost-saving

Materials Handling Products

Premium products that meet your needs

Particularly stringent requirements apply to storage and transport containers that are used in the food industry. Besides hygiene and cleanliness, containers also have to be easy to handle and transport, and cost is a key concern too.

Promens supplies a whole range of products that satisfy the very highest of demands. Because our containers are made from 100% plastic, they are ideal for use in the food industry, particularly where sauces, edible oils, liquid yeast, etc. are involved. They can be emptied completely, cleaned quickly and easily, and even help reduce noise levels during handling. What's even more, these high-quality and efficient products also have been designed attractively. From all-plastic transport silos and insulated boxes to pallets and all-plastic containers – Promens supplies high-performance products for the food industry that are designed specifically with your needs in mind.

Promens – Your plastics specialist

Promens is a leading international developer and producer of plastic packaging and plastic components and operates over 60 production sites in Europe, North America, Asia and Africa. Our comprehensive portfolio includes packaging for food and beverages, cosmetics, chemicals and pharmaceutical products. Our extensive experience, innovative solutions and exceptional quality standards ensure first-class, efficient products.

Plenty of products – but even more possibilities

Alongside our very latest developments – Hopper, MultiWay F and Cruzer – we can offer an extensive range of innovative products. We can thus help deliver the optimum conditions for your operations, whether dosing, storing goods, or delivering to customers.

Hopper

The all-plastic transport silo has many advantages. It is easy to clean, lightweight and keeps its contents safe. The Hopper is available in 1000 litre and 1800 litre versions. Various openings for filling and emptying mean that it can be used in a wide range of industrial applications with highly viscous and powder products.

MultiWay F

Specially designed for the food and pharmaceutical industries, the MultiWay F is a safe reusable container for liquids that has been designed to meet specific hygiene and cleanliness requirements.

Cruzer

The Cruzer delivers all the benefits that a 300-litre container for liquids should. It is easy to handle and is the ideal packaging for customers who do not have a forklift truck.

Innovations for smooth workflows

All of our plastic containers have been designed to ease the workload and improve efficiency in each and every stage of your production process. Different types and sizes of outlets, smooth surfaces and a whole range of detachable accessories help deliver fast and smooth workflows. What's more, the transparent plastic material used for our products makes it exceptionally easy to tell how full your container is.

Impressive benefits

Our plastic containers have a number of advantages over stainless steel alternatives. Their ingenious design ensures that only the absolute minimum of product is left behind in emptied containers and enables you to clean them quickly, easily and thoroughly. As a result, they offer the ultimate in hygienic conditions – an absolute priority for our customers in the food industry. What's more, because our containers are made from plastic, corrosion problems can finally be consigned to the past.

- **100% emptying**
- **Cleaning and hygiene**
- **Completely corrosion free**

Products that make your job easier

Our plastic containers have been designed to make them as easy as possible to handle and use. As well as reducing noise levels in production areas, our containers also put far less stress and strain on the floors and walls they come into contact with. The transparent material we use makes it easy to see exactly how much of a particular substance the container holds.

- **Easy handling**
- **Lower noise levels**
- **Fill level easy to see**
- **Protection of contents**

Products that deliver maximum efficiency

Our plastic containers are far more efficient than smaller packaging alternatives such as buckets and canisters with volumes of 10 – 25 litres. They reduce outlay on filling, emptying and loading transport pallets and can also be used multiple times during their life time. Their lower weight than stainless steel containers also has a positive impact on transport costs and can even enable you to boost your total loading capacity by up to 20 percent.

- **Easier filling and emptying**
- **Reusable**
- **Lower transport costs**

Our products are always developed with the requirements of the food and pharmaceutical industries in mind. That is why all our containers are made from materials that are suitable for direct contact with foodstuffs. The outstanding properties of our innovative products are unsurpassed by any alternative packaging types.

Tubs

These 600-litre capacity tubs do not need to be ribbed as their internal structure provides the desired stability. These too are exceptionally hygienic and easy to clean.

Storage tanks and dosing containers

These storage tanks can be used in a variety of areas and are available in sizes ranging from 60 to 15,000 litres. Made from impact-resistant polyethylene (PE), they are produced seamlessly, in a single piece, using a rotational moulding process and are therefore stress-free and break resistant.

Pallets

We offer a wide range of transport pallets (800 x 1200 mm and 1000 x 1200 mm). All are totally flat with no ribs and are therefore extremely hygienic and easy to clean. However, they are also extremely strong and deliver the stability that is essential in use.

Transport silo

Our transport silo is the perfect storage and transport system for powder, pellets, granules and substances with a high viscosity. The broad range of sizes we offer mean there is a version for practically every application.

MetaBox insulated boxes

These insulated boxes are extremely robust and ideal for the daily transportation of chilled and frozen products. They are easy to clean, stackable and fit in a standard roll container.
